

Let's celebrate!

We are the first service provider headquartered in Mexico to achieve
MEF 3.0

“ Marcatel is the first service provider based in Mexico to achieve MEF 3.0 CE certification, and we applaud this accomplishment. Customers who purchase MEF 3.0 CE certified solutions can have greater confidence that they have met the highest levels of performance, assurance, and agility established by the world's defining authority for standardized network services. ”

Nan Chen

MEF President

MEF 3.0 certification

In collaboration with networking systems, services, and software technology leader Ciena, we achieved the MEF 3.0 certification for our Carrier Ethernet network.

The MEF 3.0 certification program is designed for service providers to test and certify that their networks and services conform to MEF 3.0 global standards defining connectivity services and orchestration APIs allowing them to interconnect, orchestrate and deliver on-demand connectivity anywhere, anytime across the globe.

MEF has enhanced its popular service and technology certification programs to accelerate availability and adoption of MEF 3.0 solutions that are designed to address the most demanding networking needs of

the digital economy. Customers who purchase MEF 3.0 certified solutions have the comfort of knowing that they have met the highest levels of performance established by MEF - the world's defining authority for standardized network services. MEF 3.0 certification is delivered by MEF's testing partner, Iometrix, on an on-demand cloud-based virtual test platform that empowers companies to certify that their solutions comply with the latest MEF 3.0 standards releases. The MEF 3.0 framework provides the ability to adopt an incremental release approach for both services and LSO APIs and to tightly align certification with each release.
